Pets need us to make sure they can always find their way home if they are lost.

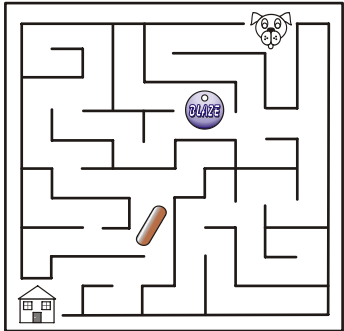

Here are two ways we can help them:

1) A dog or cat can wear a small metal or plastic tag on its collar. The chip will have his or her name, the owner's address and owner's phone number on it.

2) As small as a grain of rice, microchips are painlessly placed under a pet's skin. It contains all the information that is found on a pet I.D. tag. If a lost pet is found, a shelter or vet's office can read the microchip with a scanner.

Blaze is lost and scared. Help him find his way home. Be sure to guide him to the tag and microchip.

Did you help Blaze get home? Great job!

Now, ask a trusted adult to make sure that your pet is wearing an I.D. tag or has a microchip.

Thank you for your kindness!
